	replication and transcription by transiently cleaving and rejoining one strand of the DNA duplex.
	Introduces a single-strand break via transesterification at a target site in duplex DNA. The
	scissile phosphodiester is attacked by the catalytic tyrosine of the enzyme, resulting in the
	formation of a DNA-(3'-phosphotyrosyl)-enzyme intermediate and the expulsion of a 5'-OH DNA
	strand. The free DNA strand then rotates around the intact phosphodiester bond on the
	opposing strand, thus removing DNA supercoils. Finally, in the religation step, the DNA 5'-OH
	attacks the covalent intermediate to expel the active-site tyrosine and restore the DNA
	phosphodiester backbone (By similarity). Regulates the alternative splicing of tissue factor (F3)
	pre-mRNA in endothelial cells. Involved in the circadian transcription of the core circadian clock
	component ARNTL/BMAL1 by altering the chromatin structure around the ROR response
	elements (ROREs) on the ARNTL/BMAL1 promoter.

Immunofluorescence

Image 1. Immunofluorescence staining of Hela cells with ABIN7150342 at 1:166, counter-stained with DAPI. The cells were fixed in 4 % formaldehyde, permeabilized using 0.2 % Triton X-100 and blocked in 10 % normal Goat Serum. The cells were then incubated with the antibody overnight at 4 °C. The secondary antibody was Alexa Fluor 488-congugated AffiniPure Goat Anti-Rabbit IgG(H+L).
