	polymerase III which synthesizes small RNAs, such as 5S rRNA and tRNAs. May direct with
	other members of the subcomplex RNA Pol III binding to the TFIIIB-DNA complex via the
	interactions between TFIIIB and POLR3F. May be involved either in the recruitment and
	stabilization of the subcomplex within RNA polymerase III, or in stimulating catalytic functions
	of other subunits during initiation. Plays a key role in sensing and limiting infection by
	intracellular bacteria and DNA viruses. Acts as nuclear and cytosolic DNA sensor involved in
	innate immune response. Can sense non-self dsDNA that serves as template for transcription
	into dsRNA. The non-self RNA polymerase III transcripts, such as Epstein-Barr virus-encoded
	RNAs (EBERs) induce type I interferon and NF- Kappa-B through the RIG-I pathway.
