linked polyubiquitination of PRR5L and its subsequent proteasomal degradation thereby
indirectly regulating cell migration through the mTORC2 complex. Ubiquitinates the caspases
CASP8 and CASP10, promoting their proteasomal degradation, to negatively regulate cell death
downstream of death domain receptors in the extrinsic pathway of apoptosis. Negatively
regulates the tumor necrosis factor-mediated signaling pathway through targeting of RIPK1 to
ubiquitin-mediated proteasomal degradation. Negatively regulates p53/TP53 through its direct
ubiquitination and targeting to proteasomal degradation. Indirectly, may also negatively
regulate p53/TP53 through ubiquitination and degradation of SFN. May also play a role in
endocytic recycling.
