	48\'- and \'Lys-63\'-linked polyubiquitination of substrates. Through their polyubiquitination,
	may play a role in the endosomal sorting and degradation of several membrane receptors
	including EGFR, FLT3, MET and CXCR4. May also be part of a BAG6-dependent quality control
	process ensuring that proteins of the secretory pathway that are mislocalized to the cytosol are
	degraded by the proteasome. May provide the ubiquitin ligase activity associated with the BAG6
	complex and be responsible for ubiquitination of the mislocalized proteins and their targeting to
	the proteasome (PubMed:24981174). May also play a role in the endosomal recycling of IGF2R,
	the cation-independent mannose-6-phosphate receptor (PubMed:24275455). By ubiquitinating
	CDKN1A/p21 and targeting it for degradation, may also promote cell proliferation
	(PubMed:23026136). May monoubiquitinate AICDA (PubMed:23277564).
