## Target Details

Alternative Name:	RNF31 ( <a href="#">RNF31 Products</a> )
Background:	Background: E3 ubiquitin-protein ligase component of the LUBAC complex which conjugates linear (\\Met-1\\-linked) polyubiquitin chains to substrates and plays a key role in NF-kappa-B

## Target Details

activation and regulation of inflammation. LUBAC conjugates linear polyubiquitin to IKBKG and RIPK1 and is involved in activation of the canonical NF-kappa-B and the JNK signaling pathways. Linear ubiquitination mediated by the LUBAC complex interferes with TNF-induced cell death and thereby prevents inflammation. LUBAC is proposed to be recruited to the TNF-R1 signaling complex (TNF-RSC) following polyubiquitination of TNF-RSC components by BIRC2 and/or BIRC3 and to conjugate linear polyubiquitin to IKBKG and possibly other components contributing to the stability of the complex. Together with FAM105B/otulin, the LUBAC complex regulates the canonical Wnt signaling during angiogenesis. Binds polyubiquitin of different linkage types.
