Purification:	Antigen Affinity Purified

Target Details

Target:	NGEF	
Alternative Name:	NGEF (NGEF Products)	
Background:	Background: Acts as a guanine nucleotide exchange factor (GEF) which differentially activates	
	the GTPases RHOA, RAC1 and CDC42. Plays a role in axon guidance regulating ephrin-induced	

Target Details

growth cone collapse and dendritic spine morphogenesis. Upon activation by ephrin through EPHA4, the GEF activity switches toward RHOA resulting in its activation. Activated RHOA promotes cone retraction at the expense of RAC1- and CDC42-stimulated growth cone extension (By similarity).
