Quantity:	100 µg
Target:	EPS8
Binding Specificity:	AA 572-670
Reactivity:	Human
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This EPS8 antibody is conjugated to HRP
Application:	ELISA

Product Details

Immunogen:	Recombinant Human Epidermal growth factor receptor kinase substrate 8 protein (572-670AA)
Isotype:	lgG
Cross-Reactivity:	Human
Purification:	>95%, Protein G purified

Target Details

Target:	EPS8
Alternative Name:	EPS8 (EPS8 Products)
Background:	Background: Signaling adapter that controls various cellular protrusions by regulating actin
	cytoskeleton dynamics and architecture. Depending on its association with other signal

transducers, can regulate different processes. Together with SOS1 and ABI1, forms a trimeric
complex that participates in transduction of signals from Ras to Rac by activating the Rac-
specific guanine nucleotide exchange factor (GEF) activity. Acts as a direct regulator of actin
dynamics by binding actin filaments and has both barbed-end actin filament capping and actin
bundling activities depending on the context. Displays barbed-end actin capping activity when
associated with ABI1, thereby regulating actin-based motility process: capping activity is auto-
inhibited and inhibition is relieved upon ABI1 interaction. Also shows actin bundling activity
when associated with BAIAP2, enhancing BAIAP2-dependent membrane extensions and
promoting filopodial protrusions. Involved in the regulation of processes such as axonal
filopodia growth, stereocilia length, dendritic cell migration and cancer cell migration and
invasion. Acts as a regulator of axonal filopodia formation in neurons: in the absence of
neurotrophic factors, negatively regulates axonal filopodia formation via actin-capping activity.
In contrast, it is phosphorylated in the presence of BDNF leading to inhibition of its actin-
capping activity and stimulation of filopodia formation. Component of a complex with WHRN
and MY015A that localizes at stereocilia tips and is required for elongation of the stereocilia
actin core. Indirectly involved in cell cycle progression, its degradation following ubiquitination
being required during G2 phase to promote cell shape changes.
Aliases: Epidermal growth factor receptor kinase substrate 8 antibody, Epidermal growth factor
receptor pathway substrate 8 antibody, EPS 8 antibody, EPS8 antibody, EPS8_HUMAN antibody

UniProt:	Q12929
Pathways:	EGFR Signaling Pathway, Regulation of Actin Filament Polymerization

Application Details

Application Notes:	Optimal working dilution should be determined by the investigator.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	Preservative: 0.03 % Proclin 300 Constituents: 50 % Glycerol, 0.01M PBS, pH 7.4
Preservative:	ProClin
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.
