	with the 40S ribosome and facilitates the recruitment of eIF-1, eIF-1A, eIF-2:GTP:methionyl-
	tRNAi and eIF-5 to form the 43S preinitiation complex (43S PIC). The eIF-3 complex stimulates
	mRNA recruitment to the 43S PIC and scanning of the mRNA for AUG recognition. The eIF-3
	complex is also required for disassembly and recycling of post-termination ribosomal
	complexes and subsequently prevents premature joining of the 40S and 60S ribosomal
	subunits prior to initiation. This subunit binds directly within the mRNA entry channel of the 40S
	ribosome to the aminoacyl (A) site. It may regulate the interaction between the 43S PIC and
	mRNA.
