	induced DNA breaks by being required for efficient homologous recombination, probably in the
	resolution of homologous recombination intermediates (PubMed:20603015,
	PubMed:20603016, PubMed:20603073, PubMed:20671156, PubMed:24981866,
	PubMed:25430771). Not involved in DNA double-strand breaks resection (PubMed:20603015,
	PubMed:20603016). Acts as a 5\'-3\' exonuclease that anchors at a cut end of DNA and cleaves
	DNA successively at every third nucleotide, allowing to excise an ICL from one strand through
	flanking incisions. Probably keeps excising with 3\'-flap annealing until it reaches and unhooks
	the ICL (PubMed:25430771). Acts at sites that have a 5\'-terminal phosphate anchor at a nick
	or a 1- or 2-nucleotide flap and is augmented by a 3\' flap (PubMed:25430771). Also has
	endonuclease activity toward 5\'-flaps (PubMed:20603015, PubMed:20603016,
	PubMed:24981866).
