	phosphoinositides. Enhances integrin-mediated cell adhesion onto the extracellular matrix and
	cell spreading, this requires both its ability to interact with integrins and with phospholipid
	membranes. Required for the assembly of focal adhesions. Participates in the connection
	between extracellular matrix adhesion sites and the actin cytoskeleton and also in the
	orchestration of actin assembly and cell shape modulation. Recruits FBLIM1 to focal
	adhesions. Plays a role in the TGFB1 and integrin signaling pathways. Stabilizes active CTNNB1
	and plays a role in the regulation of transcription mediated by CTNNB1 and TCF7L2/TCF4 and in Wnt signaling.
