Target Details

Target:	KCNJ5
Alternative Name:	KCNJ5 (KCNJ5 Products)
Background:	Background: This potassium channel is controlled by G proteins. Inward rectifier potassium

Target Details

	channels are characterized by a greater tendency to allow potassium to flow into the cell rather than out of it. Their voltage dependence is regulated by the concentration of extracellular potassium, as external potassium is raised, the voltage range of the channel opening shifts to more positive voltages. The inward rectification is mainly due to the blockage of outward current by internal magnesium. Can be blocked by external barium.
