	581AA)	
Isotype:	IgG

Purification:	>95%, Protein G purified	
Target Details		
Target:	GPRC6A	
Alternative Name:	GPRC6A (GPRC6A Products)	
Background:	Background: Receptor activated by amino acids with a preference for basic amino acids such	

as L-Lys, L-Arg and L-ornithine but also by small and polar amino acids. The L-alpha amino acids respond is augmented by divalent cations Ca(2+) and Mg(2+). Activated by extracellular calcium and osteocalcin. Seems to act through a G(q)/G(11) and G(i)-coupled pathway. Mediates the non-genomic effects of androgens in multiple tissue. May coordinate nutritional and hormonal anabolic signals through the sensing of extracellular amino acids, osteocalcin, divalent ions and its responsiveness to anabolic steroids.
