Golgi. Thereby, may play a role in Golgi membrane trafficking and could indirectly give its
flattened shape to the Golgi apparatus. May also bind to the coatomer to regulate Golgi
membrane trafficking. May play a role in anterograde transport from the Golgi to the plasma
membrane and regulate secretion. Has also been involved in the control of the localization of
Golgi enzymes through interaction with their cytoplasmic part. May play an indirect role in cell
migration. Has also been involved in the modulation of mTOR signaling. May also be involved in
the regulation of mitochondrial lipids biosynthesis.
