	many important physiological processes. Highly specific: compared to other members of the
	cyclic nucleotide phosphodiesterase family, has the highest affinity and selectivity for cGMP
	(PubMed:9624146, PubMed:18757755, PubMed:21483814). Specifically regulates natriuretic-
	peptide-dependent cGMP signaling in heart, acting as a regulator of cardiac hypertrophy in
	myocytes and muscle. Does not regulate nitric oxide-dependent cGMP in heart
	(PubMed:25799991). Additional experiments are required to confirm whether its ability to
	hydrolyze natriuretic-peptide-dependent cGMP is specific to heart or is a general feature of the
	protein (Probable). In brain, involved in cognitive function, such as learning and long-term
	memory (By similarity).
