Isotype:	IgG
Cross-Reactivity:	Human
Purification:	>95%, Protein G purified

## **Target Details**

Target:	PDE9A
Alternative Name:	PDE9A (PDE9A Products)
Background:	Background: Specifically hydrolyzes the second messenger cGMP, which is a key regulator of

many important physiological processes. Highly specific: compared to other members of the cyclic nucleotide phosphodiesterase family, has the highest affinity and selectivity for cGMP (PubMed:9624146, PubMed:18757755, PubMed:21483814). Specifically regulates natriuretic-peptide-dependent cGMP signaling in heart, acting as a regulator of cardiac hypertrophy in myocytes and muscle. Does not regulate nitric oxide-dependent cGMP in heart (PubMed:25799991). Additional experiments are required to confirm whether its ability to hydrolyze natriuretic-peptide-dependent cGMP is specific to heart or is a general feature of the protein (Probable). In brain, involved in cognitive function, such as learning and long-term memory (By similarity).
