| | both insulin and glucagon levels and modulates the expression of pancreatic genes involved in |
| | insulin secretion. Regulates the expression of the glucose transporter SLC2A2 by binding |
| | specifically to its promoter region and recruiting PDX1 and additional transcription factors. |
| | Regulates the expression of SLC6A9, a glycine transporter which regulates the glycine |
| | concentration in synaptic junctions in the central nervous system, by binding to its transcription |
| | start site. May play a role in ocular development and astrocyte function (By similarity). |
