Target Details

Target:	EZH1
Alternative Name:	EZH1 (EZH1 Products)
Background:	Background: Polycomb group (PcG) protein. Catalytic subunit of the PRC2/EED-EZH1 complex, which methylates Lys-27 of histone H3, leading to transcriptional repression of the

Target Details

affected target gene. Able to mono-, di- and trimethylate '\\Lys-27\\' of histone H3 to form H3K27me1, H3K27me2 and H3K27me3, respectively. Required for embryonic stem cell derivation and self-renewal, suggesting that it is involved in safeguarding embryonic stem cell identity. Compared to EZH2-containing complexes, it is less abundant in embryonic stem cells, has weak methyltransferase activity and plays a less critical role in forming H3K27me3, which is required for embryonic stem cell identity and proper differentiation.
