Target Details

Target Details

activation. Plays a central role in the transcriptional activation of genes such as collagenase or insulin. Recruited by IPF1/PDX-1 to the insulin promoter, leading to activate transcription. Has also methyltransferase activity toward non-histone proteins such as p53/TP53, TAF10, and possibly TAF7 by recognizing and binding the [KR]-[STA]-K in substrate proteins.

Monomethylates '\\Lys-189\\' of TAF10, leading to increase the affinity of TAF10 for RNA polymerase II. Monomethylates '\\Lys-372\\' of p53/TP53, stabilizing p53/TP53 and increasing p53/TP53-mediated transcriptional activation.
