	linking GRM1 and GRM5 with ER-associated ITPR1 receptors, it aids the coupling of surface
	receptors to intracellular calcium release. May also couple GRM1 to PI3 kinase through its
	interaction with AGAP2. Isoform 1 regulates the trafficking and surface expression of GRM5.
	Isoform 3 acts as a natural dominant negative, in dynamic competition with constitutively
	expressed isoform 1 to regulate synaptic metabotropic glutamate function. Isoform 3, may be
	involved in the structural changes that occur at synapses during long-lasting neuronal plasticity
	and development. Forms a high-order complex with SHANK1, which in turn is necessary for the
	structural and functional integrity of dendritic spines (By similarity).
