Target Details

Target:	Plexin B2 (PLXNB2)
Alternative Name:	PLXNB2 (PLXNB2 Products)
Background:	Background: Cell surface receptor for SEMA4C, SEMA4D and SEMA4G that plays an important

role in cell-cell signaling. Binding to class 4 semaphorins promotes downstream activation of RHOA and phosphorylation of ERBB2 at \'Tyr-1248\'. Required for normal differentiation and migration of neuronal cells during brain corticogenesis and for normal embryonic brain development. Regulates the migration of cerebellar granule cells in the developing brain. Plays a role in RHOA activation and subsequent changes of the actin cytoskeleton. Plays a role in axon guidance, invasive growth and cell migration. May modulate the activity of RAC1 and CDC42. Down-regulates macrophage migration in wound-healing assays (in vitro) (By similarity).
