Target Details

for the heterodimeric	c class II cytokine receptor composed of IL10RB and IFNLR1, and receptor
engagement leads to	o the activation of the JAK/STAT signaling pathway resulting in the
expression of IFN-st	imulated genes (ISG), which mediate the antiviral state. Has a restricted
receptor distribution	and therefore restricted targets: is primarily active in epithelial cells and
this cell type-selectiv	e action is because of the epithelial cell-specific expression of its receptor
IFNLR1. Exerts an in	nmunomodulatory effect by up-regulating MHC class I antigen expression.
