| processes, cell migration, proliferation, signaling, and viral replication. Enhances MAVS- | |
|---|---------|
| mediated host antiviral responses by serving as an adapter bridging TBK1 to MAVS which | h leads |
| to the activation of TBK1 and phosphorylation of IRF3 and phosphorylated IRF3 transloca | ates |
| into nucleus to promote antiviral gene transcription. Exihibits an antiproliferative activity | /ia the |
| up-regulation of cell cycle negative regulators CDKN1A/p21 and CDKN1B/p27. Normally, | |
| CDKN1B/p27 turnover is regulated by COPS5, which binds CDKN1B/p27 in the nucleus a | nd |
| exports it to the cytoplasm for ubiquitin-dependent degradation. IFIT3 sequesters COPS5 | in the |
| cytoplasm, thereby increasing nuclear CDKN1B/p27 protein levels. Upregulates CDKN1A | /p21 |
| by downregulating MYC, a repressor of CDKN1A/p21. Can negatively regulate the apopto | tic |
| effects of IFIT2. | |
