This suggests that it is required in renal development to oppose the repression of terminal differentiation of tubular epithelial cells by Wnt signaling. Involved in the organization of apical junctions in kidney cells together with NPHP1, NPHP4 and RPGRIP1L/NPHP8 (By similarity). Does not seem to be strictly required for ciliogenesis (By similarity).</li> <li>Aliases: INVS antibody, INV antibody, NPHP2 antibody, Inversin antibody, Inversion of embryo turning homolog antibody, Nephrocystin-2 antibody</li> </ul>
