| | synapses. Required for formation of mossy fiber filopodia, the synaptic structures connecting |
|---------------------|--|
| | dentate granule and GABA neurons. Probably acts as a homophilic adhesion molecule that |
| | promotes trans-cellular interactions and stabilize mossy fiber filipodia contact and subsequent |
| | synapse formation. Required for the coalescence of vomeronasal sensory neuron axons. May |
| | be involved in the hematopoietic supportive capacity of stroma cells, the secreted extracellular |
| | domain is directly responsible for supporting hematopoietic stem cells. |
