## Target Details

Target:	KIRREL3
Alternative Name:	KIRREL3 ( <a href="#">KIRREL3 Products</a> )
Background:	Background: Synaptic adhesion molecule required for the formation of target-specific synapses. Required for formation of target-specific synapses at hippocampal mossy fiber

## Target Details

synapses. Required for formation of mossy fiber filopodia, the synaptic structures connecting dentate granule and GABA neurons. Probably acts as a homophilic adhesion molecule that promotes trans-cellular interactions and stabilize mossy fiber filopodia contact and subsequent synapse formation. Required for the coalescence of vomeronasal sensory neuron axons. May be involved in the hematopoietic supportive capacity of stroma cells, the secreted extracellular domain is directly responsible for supporting hematopoietic stem cells.
