| polymerization. Inhibits actin fiber formation and cell migration. Inhibits RhoA activity, the |
|---|
| function involves phosphorylation through PI3K/Akt signaling and may depend on the |
| competetive interaction with 14-3-3 adapter proteins to sequester them from active complexes. |
| Inhibits the formation of lamellipodia but not of filopodia, the function may depend on the |
| competetive interaction with BAIAP2 to block its association with activated RAC1. Inhibits |
| fibronectin-mediated cell spreading, the function is partially mediated by BAIAP2. Inhibits |
| neurite outgrowth. Involved in the establishment and persistence of cell polarity during directed |
| cell movement in wound healing. In the nucleus, is involved in beta-catenin-dependent |
| activation of transcription. Potential tumor suppressor for renal cell carcinoma. |
