	binds to HNRPA1-associated poly(A) mRNAs and is part of nmRNP complexes at late stages of
	mRNA maturation which are possibly associated with nuclear mRNA export. May bind mature
	mRNA in the nucleus outer membrane. In mitochondria binds to poly(A) mRNA. Plays a role in
	translation or stability of mitochondrially encoded cytochrome c oxidase (COX) subunits. May
	be involved in transcription regulation. Cooperates with PPARGC1A to regulate certain
	mitochondrially encoded genes and gluconeogenic genes and may regulate docking of
	PPARGC1A to transcription factors. Seems to be involved in the transcription regulation of the
	multidrug-related genes MDR1 and MVP. Part of a nuclear factor that binds to the invMED1
	element of MDR1 and MVP gene promoters. Binds single-stranded DNA (By similarity).
