	the acceptor end of the tRNA (PubMed:9278442, PubMed:18029264, PubMed:18272479).
	When secreted, acts as a signaling molecule that induces immune response through the
	activation of monocyte/macrophages (PubMed:15851690). Catalyzes the synthesis of the
	signaling molecule diadenosine tetraphosphate (Ap4A), and thereby mediates disruption of the
	complex between HINT1 and MITF and the concomitant activation of MITF transcriptional
	activity (PubMed:5338216, PubMed:14975237, PubMed:19524539, PubMed:23159739).
	(Microbial infection) Interacts with HIV-1 virus GAG protein, facilitating the selective packaging
	of tRNA3(Lys), the primer for reverse transcription initiation.
