Target Details	
	transcription of nearly all RNA polymerase II-dependent genes. Mediator functions as a bridg
	to convey information from gene-specific regulatory proteins to the basal RNA polymerase II
	transcription machinery. Mediator is recruited to promoters by direct interactions with
	regulatory proteins and serves as a scaffold for the assembly of a functional preinitiation
	complex with RNA polymerase II and the general transcription factors. Required for
	RARA/RXRA-mediated transcription.
