Alternative Name:	MAP1LC3B2 (MAP1LC3B2 Products)
Background:	Background: Ubiquitin-like modifier involved in formation of autophagosomal vacuoles

Target Details

(autophagosomes). Plays a role in mitophagy which contributes to regulate mitochondrial quantity and quality by eliminating the mitochondria to a basal level to fulfill cellular energy requirements and preventing excess ROS production. Whereas LC3s are involved in elongation of the phagophore membrane, the GABARAP/GATE-16 subfamily is essential for a later stage in autophagosome maturation (By similarity).
