capable of endonuclease activity on linear substrates. Necessary for maintenance of proper 7S DNA levels. Probably involved in mitochondrial DNA (mtDNA) repair, possibly via the processing of displaced DNA containing Okazaki fragments during RNA-primed DNA synthesis on the lagging strand or via processing of DNA flaps during long-patch base excision repair.

Specifically binds 5-hydroxymethylcytosine (5hmC)-containing DNA in stem cells.

Aliases: MGME1 antibody, C20orf72 antibody, DDK1 Mitochondrial genome maintenance exonuclease 1 antibody, EC 3.1.-.- antibody
