Target Details

Target:	SETD8
Alternative Name:	KMT5A (SETD8 Products)
Background:	Background: Protein-lysine N-methyltransferase that monomethylates both histones and non-histone proteins. Specifically monomethylates '\\Lys-20\\' of histone H4 (H4K20me1).

Target Details

H4K20me1 is enriched during mitosis and represents a specific tag for epigenetic transcriptional repression. Mainly functions in euchromatin regions, thereby playing a central role in the silencing of euchromatic genes. Required for cell proliferation, probably by contributing to the maintenance of proper higher-order structure of DNA during mitosis. Involved in chromosome condensation and proper cytokinesis. Nucleosomes are preferred as substrate compared to free histones. Mediates monomethylation of p53/TP53 at '\Lys-382\' , leading to repress p53/TP53-target genes. Plays a negative role in TGF-beta response regulation and a positive role in cell migration.
