Target Details

Target:	COBRA1	
Alternative Name:	NELFB (COBRA1 Products)	
Background:	Background: Essential component of the NELF complex, a complex that negatively regulates	
	the elongation of transcription by RNA polymerase II. The NELF complex, which acts via an

association with the DSIF complex and causes transcriptional pausing, is counteracted by the P-TEFb kinase complex. The NELF complex is involved in HIV-1 latency possibly involving recruitment of PCF11 to paused RNA polymerase II. Binds RNA which may help to stabilize the NELF complex on nucleic acid. In vitro, binds weakly to the HIV-1 TAR RNA which is located in the long terminal repeat (LTR) of HIV-1. May be able to induce chromatin unfolding. Aliases: NELFB antibody, COBRA1 antibody, KIAA1182 antibody, Negative elongation factor B antibody, NELF-B antibody, Cofactor of BRCA1 antibody
