	microenvironment. Interacts with MSL1 and inhibits its activity on histone H4 \'Lys-16\' $$
	acetylation (H4K16ac). Binds the RELB promoter and activates its transcription, leading to the
	transactivation of IER3. The NUPR1/RELB/IER3 survival pathway may provide pancreatic ducta
	adenocarcinoma with remarkable resistance to cell stress, such as starvation or gemcitabine
	treatment. In breast cancer cells, NUPR1 overexpression leads to the activation of PI3K/AKT
	signaling pathway, CDKN1A/p21 phosphorylation and relocalization from the nucleus to the
	cytoplasm, leading to resistance to chemotherapeutic agents, such as doxorubicin.
