	actin capping protein (CP). May function to target CK2 to the plasma membrane thereby
	serving as an adapter to facilitate the phosphorylation of CP by protein kinase 2 (CK2). Appears
	to target ATM to the plasma membrane. Appears to also inhibit tumor cell growth by inhibiting
	AKT-mediated cell-survival. Also implicated in PI3K-regulated muscle differentiation, the
	regulation of AP-1 activity (plasma membrane bound AP-1 regulator that translocates to the
	nucleus) and the promotion of apoptosis induced by tumor necrosis factor TNF. When bound
	to PKB, it inhibits it probably by decreasing PKB level of phosphorylation.
