	activating KDM5D histone demethylase. Component of a Polycomb group (PcG) multiprotein

Target Details

PRC1-like complex, a complex class required to maintain the transcriptionally repressive state of many genes, including Hox genes, throughout development. PcG PRC1 complex acts via chromatin remodeling and modification of histones, it mediates monoubiquitination of histone H2A \'Lys-119\', rendering chromatin heritably changed in its expressibility.
