Polymerase II (Pol II) binding to chromatin and through its interaction with proteins involved in			
transcription (PubMed:19515850, PubMed:21700224). Contributes to the mRNA splicing			
efficiency and splice site selection (PubMed:19515850). Required for the resolution of R-loop			
RNA-DNA hybrid formation at G-rich pause sites located downstream of the poly(A) site,			
allowing XRN2 recruitment and XRN2-mediated degradation of the downstream cleaved RNA			
and hence efficient RNA polymerase II (RNAp II) transcription termination (PubMed:19515850,			
PubMed:21700224). Required for the 3\' transcriptional termination of PER1 and CRY2, thus			
playing an important role in the circadian rhythm regulation (By similarity). Involved in DNA			
double-strand breaks damage response generated by oxidative stress (PubMed:17562789). In			
association with RRP45, targets the RNA exosome complex to sites of transcription-induced			
DNA damage (PubMed:24105744). Plays a role in the development and maturation of germ			
cells: essential for male meiosis, acting at the interface of transcription and meiotic			
recombination, and in the process of gene silencing during meiotic sex chromosome			
inactivation (MSCI) (By similarity). May be involved in telomeric stability through the regulation			
of telomere repeat-containing RNA (TERRA) transcription (PubMed:21112256). Plays a role in			
neurite outgrowth in hippocampal cells through FGF8-activated signaling pathways. Inhibits			
retinoic acid-induced apoptosis (PubMed:21576111).
