	spermatogenesis and DNA damage response. Recognizes and binds acetylated histones via its
	bromodomain-like (BRDL) region and activates the proteasome by opening the gated channel
	for substrate entry. Binds to the core proteasome via its C-terminus, which occupies the same
	binding sites as the proteasomal ATPases, opening the closed structure of the proteasome via
	an active gating mechanism. Component of the spermatoproteasome, a form of the
	proteasome specifically found in testis: binds to acetylated histones and promotes degradatior
	of histones, thereby participating actively to the exchange of histones during spermatogenesis.
	Also involved in DNA damage response in somatic cells, by promoting degradation of histones
	following DNA double-strand breaks.
	Aliases: KIAA0077 antibody, PA200 antibody, Proteasome Activator 200 kDa antibody,
