	subunits, 2 rings are composed of 7 alpha subunits and 2 rings are composed of 7 beta
	subunits. Proteasomes are distributed throughout eukaryotic cells at a high concentration and
	cleave peptides in an ATP/ubiquitin dependent process in a non-lysosomal pathway. An
	essential function of a modified proteasome, the immunoproteasome, is the processing of
	class I MHC peptides. PSMB2 is a member of the proteasome B-type family, also known as the
