	the assembly of ULK1, Beclin 1/BECN1, ATG16L1, and ATG8 family members and recognizes
	specific autophagy targets, thus coordinating target recognition with assembly of the
	autophagic apparatus and initiation of autophagy. Acts as an autophagy receptor for the
	degradation of several inflammasome components, including CASP1, NLRP1 and NLRP3,
	hence preventing excessive IL1B- and IL18-mediated inflammation (PubMed:16785446,
	PubMed:17431422, PubMed:26347139). However, it may also have a positive effect in the
	inflammatory pathway. In different experimental systems, it has been shown to activate IL1B
	production (PubMed:16037825). It has also been shown to be required for PSTPIP1-induced
	PYCARD oligomerization and for formation of inflammasomes. Recruits PSTPIP1 to
	inflammasomes, and is required for PSTPIP1 oligomerization (PubMed:10807793,
	PubMed:11468188, PubMed:17964261, PubMed:18577712, PubMed:19109554,
