	trafficking. Accomplishes its multiple functions by interacting with distinct downstream
	effectors. Acts as a GTP sensor for GTP-dependent exocytosis of dense core vesicles. Plays a
	role in the early stages of cytokinesis and is required to tether the exocyst to the cytokinetic
	furrow. The RALA-exocyst complex regulates integrin-dependent membrane raft exocytosis
	and growth signaling. Key regulator of LPAR1 signaling and competes with GRK2 for binding t
	LPAR1 thus affecting the signaling properties of the receptor. Required for anchorage-
	independent proliferation of transformed cells.

Immunofluorescence

Image 1. Immunofluorescence staining of Hela cells with ABIN7167390 at 1:100, counter-stained with DAPI. The cells were fixed in 4% formaldehyde, permeabilized using 0.2% Triton X-100 and blocked in 10% normal Goat Serum. The cells were then incubated with the antibody overnight at 4°C. The secondary antibody was Alexa Fluor 488-congugated AffiniPure Goat Anti-Rabbit IgG(H+L).
