	determinations. Acts as a transcriptional repressor when it is not associated with Notch
	proteins. When associated with some NICD product of Notch proteins (Notch intracellular
	domain), it acts as a transcriptional activator that activates transcription of Notch target genes.
	Probably represses or activates transcription via the recruitment of chromatin remodeling
	complexes containing histone deacetylase or histone acetylase proteins, respectively.
	Specifically binds to the immunoglobulin kappa-type J segment recombination signal
	sequence. Binds specifically to methylated DNA. Binds to the oxygen responsive element of
	COX4I2 and activates its transcription under hypoxia conditions (4 % oxygen)
	(PubMed:23303788).
