Product Details

Immunogen:	Recombinant Human Rho guanine nucleotide exchange factor 18 protein (159-551AA)	
Isotype:	IgG	
Cross-Reactivity:	Human	
Purification:	>95%, Protein G purified	

Target Details

Target:	ARHGEF18
Alternative Name:	ARHGEF18 (ARHGEF18 Products)
Background:	Background: Acts as guanine nucleotide exchange factor (GEF) for RhoA GTPases. Its
	activation induces formation of actin stress fibers. Also act as a GEF for RAC1, inducing

production of reactive oxygen species (ROS). Does not act as a GEF for CDC42. The G protein beta-gamma (Gbetagamma) subunits of heterotrimeric G proteins act as activators, explaining the integrated effects of LPA and other G-protein coupled receptor agonists on actin stress fiber formation, cell shape change and ROS production. Required for EPB41L4B-mediated regulation of the circumferential actomyosin belt in epithelial cells (PubMed:22006950).
