## Target Details

Background:	<p>Synonyms: HEPS, HEPS_HUMAN, Hepsin, HPN, Serine protease hepsin, Serine protease hepsin catalytic chain, Serine protease hepsin non catalytic chain, TMPRSS 1, TMPRSS1, Transmembrane protease serine 1.</p> <p>Background: This gene encodes a type II transmembrane serine protease. The encoded protein has an extracellular region that consists of two domains, a catalytic serine protease domain and a non-catalytic scavenger receptor cysteine-rich domain. This protein may be involved in diverse cellular functions including blood coagulation, maintenance of cell morphology and the growth and progression of certain cancers, particularly prostate cancer. Alternative splicing results in multiple transcript variants.</p>
