	proteasomal degradation. In complex with CUL3, involved in ubiquitination and proteasomal
	degradation of BRMS1, DAXX, PDX1/IPF1, GLI2 and GLI3. In complex with CUL3, involved in
	ubiquitination of H2AFY and BMI1, this does not lead to their proteasomal degradation. Inhibits
	transcriptional activation of PDX1/IPF1 targets, such as insulin, by promoting PDX1/IPF1
	degradation. The cullin-RING-based BCR (BTB-CUL3-RBX1) E3 ubiquitin-protein ligase complex
	containing homodimeric SPOP has higher ubiquitin ligase activity than the complex that
	contains the heterodimer formed by SPOP and SPOPL.
