	PubMed:19289083, PubMed:23085020). Required for timely anaphase onset during mitosis,
	when chromosomes undergo bipolar attachment on spindle microtubules leading to silencing
	of the spindle checkpoint (PubMed:17093495). The SKA1 complex is a direct component of the
	kinetochore-microtubule interface and directly associates with microtubules as oligomeric
	assemblies (PubMed:19289083). The complex facilitates the processive movement of
	microspheres along a microtubule in a depolymerization-coupled manner (PubMed:19289083).
	Affinity for microtubules is synergistically enhanced in the presence of the ndc-80 complex and
	may allow the ndc-80 complex to track depolymerizing microtubules (PubMed:23085020). In
	the complex, it mediates the interaction with microtubules (PubMed:19289083,
	PubMed:23085020).
