	ubiquitination and subsequent proteasomal degradation. Inhibits also prolactin, growth
	hormone and leptin signaling by preventing STAT3 and STAT5 activation, sequestering them in
	the cytoplasm and reducing their binding to DNA. May be a substrate recognition component of
	a SCF-like E3 ubiquitin-protein ligase complex which mediates the ubiquitination and
	subsequent proteasomal degradation of target proteins (By similarity).
