	associates with spliced mRNA and not with unspliced pre-mRNA. TREX is recruited to spliced
	mRNAs by a transcription-independent mechanism, binds to mRNA upstream of the exon-
	junction complex (EJC) and is recruited in a splicing- and cap-dependent manner to a region
	near the 5\' end of the mRNA where it functions in mRNA export to the cytoplasm via the
	TAP/NFX1 pathway. The TREX complex is essential for the export of Kaposi\'s sarcoma-
	associated herpesvirus (KSHV) intronless mRNAs and infectious virus production. Plays a role
	in apoptosis negative control involved in brain development.
