Background:	Background: Multifunctional protein that controls proliferation, differentiation and other functions in many cell types. Many cells synthesize TGFB1 and have specific receptors for it. It	

positively and negatively regulates many other growth factors. It plays an important role in bone remodeling as it is a potent stimulator of osteoblastic bone formation, causing chemotaxis, proliferation and differentiation in committed osteoblasts.

Aliases: Cartilage-inducing factor antibody, CED antibody, Differentiation inhibiting factor antibody, DPD1 antibody, LAP antibody, Latency-associated peptide antibody, Prepro transforming growth factor beta 1 antibody, TGF beta 1 antibody, TGF beta antibody, TGF beta 1 protein antibody, TGF-beta-1 antibody, TGF-beta-5 antibody, TGF-beta-1 antibody, TGF-beta-1 antibody, TGFB1_HUMAN antibody, TGFbeta antibody, TGFbeta 1 antibody, Transforming Growth Factor b1 antibody, Transforming Growth Factor beta 1 antibody, Transforming growth factor beta 1 antibody, transforming Growth Factor beta-1 antibody, transforming Growth Factor-1 antibody

Immunohistochemistry

Image 1. IHC image of ABIN7172814 diluted at 1:600 and staining in paraffin-embedded human liver cancer performed on a Leica BondTM system. After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a biotinylated secondary antibody and visualized using an HRP conjugated SP system.
