Target Details

interactions at the focal adhesion complex and in the nucleus. Links various intracellular signaling modules to plasma membrane receptors and regulates the Wnt and TGFB signaling pathways. May also regulate SLC6A3 and SLC6A4 targeting to the plasma membrane hence regulating their activity. In the nucleus, functions as a nuclear receptor coactivator regulating glucocorticoid, androgen, mineralocorticoid and progesterone receptor transcriptional activity. May play a role in the processes of cell growth, proliferation, migration, differentiation and senescence. May have a zinc-dependent DNA-binding activity.

Aliases: Androgen receptor coactivator 55 kDa protein antibody, Androgen receptor coactivator ARA55 antibody, Androgen receptor-associated protein of 55 kDa antibody, ARA55 antibody, Hic-5 antibody, Hydrogen peroxide-inducible clone 5 protein antibody, Tgfb1i1 antibody, TGF11_HUMAN antibody, Transforming growth factor beta 1 induced transcript 1 antibody, Transforming growth factor beta-1-induced transcript 1 protein antibody, TSC 5 antibody
